

Network Types — Guided Notes

Unit 1.2.2 | CompTIA Network+ N10-009 Obj. 1.2 | N10-008 1.2

Name: _____ Date: _____ Period: _____

Complete each question using the lesson reading. Write in the blank or answer in the space provided.

Question 1

A _____ (LAN) covers a single building or small group of buildings and is typically owned by _____. A _____ (WAN) connects networks across large geographic distances and usually crosses infrastructure owned by _____.

Question 2

Match each network type to its scope:

Personal Area Network (PAN) → _____

Campus Area Network (CAN) → _____

Metropolitan Area Network (MAN) → _____

Question 3

A WLAN provides the same connectivity as a wired LAN but uses _____ instead of copper or fiber. Two key tradeoffs versus wired Ethernet are _____ and _____.

Question 4

MPLS routes WAN traffic using short _____ instead of full IP addresses. Businesses buy MPLS circuits for _____ and _____. The main disadvantage of MPLS compared to newer options is _____.

Question 5

SD-WAN places a _____ layer on top of multiple transport links (MPLS, broadband, LTE) and routes traffic based on _____. The business benefit over traditional MPLS is _____.

Question 6

In a _____ network architecture, dedicated servers provide resources and clients consume them. In a _____ architecture, every device can act as both client and server. At approximately _____ devices, peer-to-peer becomes unmanageable.

Question 7

A SOHO network is typically a _____ design with one _____ and one _____ domain. The all-in-one device combines a router, switch, wireless access point, DHCP server, firewall, and _____ in a single box.

Question 8 — Real World Application

REAL WORLD: A school's IoT security cameras have been compromised and are sending spam traffic. The cameras share the same network as student workstations and staff file servers. What network design change would contain the damage and prevent the cameras from reaching production systems? Explain the concept behind your solution.

Download the answer key from the class server:

```
