

# Windows Security -- Guided Notes

Unit 3.2 | CompTIA Network+ N10-009 Obj. Core 2 2.2 | N10-008

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Period: \_\_\_\_\_

---

*Complete each question using the lesson reading. Write in the blank or answer in the space provided.*

## Question 1

Windows \_\_\_\_\_ is the built-in antivirus and antimalware solution included with Windows 10 and 11. It provides \_\_\_\_\_-time protection by scanning files as they are opened or downloaded. When a third-party antivirus is installed, Windows Defender automatically \_\_\_\_\_.

---

---

---

## Question 2

Windows \_\_\_\_\_ is a host-based firewall that blocks \_\_\_\_\_ connections by default. It maintains separate profiles for \_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_ networks. Outbound connections are \_\_\_\_\_ by default, meaning programs can send data out without a firewall rule.

---

---

---

## Question 3

BitLocker encrypts the entire \_\_\_\_\_ drive to protect data if the device is lost or stolen. It requires a \_\_\_\_\_ chip on the motherboard to store the encryption key securely. If the TPM fails or the drive is moved to a different computer, a \_\_\_\_\_ key (a 48-digit numeric code) is required to unlock the drive.

---

---

---

## Question 4

Windows \_\_\_\_\_ delivers security patches and bug fixes to the operating system. Delaying or disabling updates leaves the system vulnerable to \_\_\_\_\_ that target known vulnerabilities. Zero-day vulnerabilities are exploits that exist before a \_\_\_\_\_ is available.

---

---

---

## Question 5

UAC has four configurable levels. At the highest level, Windows notifies about \_\_\_\_\_ system changes. At the default level, Windows notifies only when \_\_\_\_\_ make changes. At a lower level, UAC notifies only when apps try to install software. Disabling UAC entirely removes all \_\_\_\_\_ before system changes.

---

---

---

## Question 6

Safe Mode loads Windows with \_\_\_\_\_ drivers and services, making it useful for diagnosing and removing malware. Safe Mode with \_\_\_\_\_ allows internet access for downloading tools. Safe Mode can be accessed by holding \_\_\_\_\_ while clicking Restart, or by pressing F8 during older system boot sequences.

### Question 7

Match each malware type to its description:

Ransomware: \_\_\_\_\_

Adware: \_\_\_\_\_

Trojan: \_\_\_\_\_

Rootkit: \_\_\_\_\_

### Question 8 -- Real World Application

REAL WORLD: A user reports that all their document files now have a .locked extension and cannot be opened. A message on the desktop demands payment in cryptocurrency to restore the files. Describe what type of attack this is, explain why restoring from a backup is the safest response, and list two preventive measures that could have prevented this attack.
