

OS Installation and Recovery -- Guided Notes

Unit 3.3 | CompTIA Network+ N10-009 Obj. Core 2 1.3 | N10-008

Name: _____ Date: _____ Period: _____

Complete each question using the lesson reading. Write in the blank or answer in the space provided.

Question 1

A _____ install completely wipes the existing drive and installs a fresh copy of Windows, removing all user data and applications. An _____ install preserves the user's files, settings, and installed applications while replacing the OS files. An upgrade is only available from a _____ (older/newer) version of Windows.

Question 2

_____ is a free tool used to create a bootable USB drive from a Windows ISO file. After downloading the Windows ISO from Microsoft, you point Rufus to the _____ file, select the USB drive, choose the _____ partition scheme (required for UEFI + Windows 11), and click Start.

Question 3

To boot from a USB drive, the technician must change the _____ order in UEFI settings so the USB device is listed _____ the hard drive. UEFI settings are accessed by pressing a key such as _____, _____, or _____ immediately when the system powers on (varies by manufacturer).

Question 4

Windows 11 requires UEFI boot with _____ disabled (no legacy CSM mode) and a _____ partition table on the drive. It also requires _____ version 2.0 and _____ (a firmware security feature). These requirements exist to improve _____ compared to older Windows versions.

Question 5

Windows Recovery Environment (WinRE) provides repair tools when Windows fails to start. It can be accessed by pressing _____ + Restart in Windows Settings, holding _____ while clicking Restart, or by Windows automatically offering it after _____ consecutive failed boot attempts.

Question 6

System Restore returns the OS to a previous _____ point, undoing recent driver or software changes, while preserving _____. Reset This PC re-installs Windows and gives the user the option to _____ or _____ personal files. Reset This PC is more thorough and is closer to a _____ install.

Question 7

After a clean Windows installation, the recommended driver installation order is: _____ drivers first, then _____ drivers, then GPU drivers, then peripheral drivers. The chipset drivers must go first because they enable the CPU, PCIe lanes, and USB controllers that _____ drivers depend on.

Question 8 -- Real World Application

REAL WORLD: A customer brings in a laptop running Windows 10 with a failed SSD. You replace the SSD with a new NVMe drive and attempt a clean Windows 11 install from USB. The installer says the PC does not meet the requirements. List the most likely causes in order of probability and describe the UEFI settings you would check to resolve each one.

Download the answer key from the class server:
