

Customer Professionalism -- Guided Notes

Unit 5.1 | CompTIA Network+ N10-009 Obj. Core 2 4.1 | N10-008

Name: _____ Date: _____ Period: _____

Complete each question using the lesson reading. Write in the blank or answer in the space provided.

Question 1

Active listening means giving the customer your full _____ and not interrupting them. After they finish speaking, a technician should _____ back what they said to confirm understanding (e.g., 'So what I'm hearing is...'). This technique is called _____ and reduces misunderstandings and repeat calls.

Question 2

Open-ended questions cannot be answered with yes or no and _____ more information from the customer (e.g., 'Can you describe what happens when you turn it on?'). Closed questions _____ the answer to yes or no (e.g., 'Does it turn on?'). Open-ended questions should be used primarily at the _____ of the troubleshooting conversation.

Question 3

Before beginning any repair, a professional technician should set _____ by communicating the estimated _____ of the repair and its likely _____ to the customer. If unexpected complications arise during the repair, the technician should _____ the customer before proceeding rather than surprising them later.

Question 4

When explaining a technical issue to a non-technical customer, a good technician avoids _____ (technical language and acronyms the customer does not understand) and uses _____ instead. For example, instead of saying 'the HDD is experiencing read/write head actuator failure,' say '_____'.

Question 5

When repairing a customer's device, a technician must respect the customer's _____ by only accessing files, folders, and data that are _____ to the repair. Accessing personal photos, documents, or accounts that are not related to the technical problem is _____ and could violate _____ laws.

Question 6

Escalation is the process of transferring a problem to a _____ -level technician or specialist when the issue is beyond the current technician's _____ or _____. Before escalating, the technician should document what has been _____ and share that information with the next technician to avoid repeating steps.

Question 7

After completing a repair, the technician should document all _____ performed, all _____ replaced or installed, and the _____ to the problem. Following up with the customer after service -- for example, calling the next day to confirm everything is working -- builds _____ and reduces call-backs.

Question 8 -- Real World Application

REAL WORLD: You arrive to repair a business client's computer. The client is agitated and says, 'This is the third time this has happened -- your company always does a bad job.' You believe the recurring issue is caused by something the client is doing. Describe how you would handle this situation professionally, using the communication techniques from this unit.
