

Network Documentation — Guided Notes

Unit 3.1.1 | CompTIA Network+ N10-009 Obj. 3.1 | N10-008 3.1

Name: _____ Date: _____ Period: _____

Complete each question using the lesson reading. Write in the blank or answer in the space provided.

Question 1

A _____ diagram shows the logical layout of a network — IP address ranges, VLANs, routing paths, and subnets — without regard to physical location. A _____ diagram shows where devices actually sit — buildings, racks, cable runs, and port connections.

Question 2

What is IPAM, and why is it more reliable than a spreadsheet for tracking IP address assignments on a large network?

Question 3

A VLAN table documents each VLAN's _____, _____, and the _____ it connects to. Without this table, adding a new switch to the network means guessing which VLANs to configure.

Question 4

A network baseline captures normal metrics — bandwidth utilization, CPU load, latency — during _____ operation. Explain how a baseline helps during troubleshooting.

Question 5

Rack documentation should include each device's _____, its _____ connections (what's plugged into which port), and the device's _____. Why does this matter when a device needs to be replaced at 3 AM?

Question 6

The _____ log records every configuration change made to the network — what changed, when, who made it, and why. How does this directly speed up troubleshooting?

Question 7

Standard Operating Procedures (SOPs) document how to perform _____ tasks. Explain why 'knowledge in people's heads' is a liability, and what happens when those people are unavailable.

Question 8 — Real World Application

REAL WORLD: You inherit a network with no documentation. Describe the order in which you would build documentation from scratch, and explain why you would start with that first item.

Download the answer key from the class server:
