

Peripherals -- Guided Notes ANSWER KEY

Unit tp-2.6 | CompTIA Network+ N10-009 Obj. FC0-U71 2.6 | N10-008 FC0-U71 2.6

For instructor use / distribute after students complete the notes.

Question 1

_____ are output devices that produce physical copies of digital documents. A _____ printer uses liquid ink sprayed through nozzles and is good for _____ printing. A _____ printer uses heat and a toner drum and is better for high-volume _____ printing.

Answer: Printers; inkjet; color/photo; laser; document (black-and-white).

Question 2

A _____ is an input device that converts a physical document or photo into a digital image file. A _____ combines a printer, scanner, and sometimes a fax machine into one device. When a scanner is connected to a network and shared, multiple users can scan to _____.

Answer: Scanner; multifunction printer (MFP/all-in-one); email/shared folders.

Question 3

Keyboards and mice connect via _____ (wired USB) or _____ (2.4 GHz USB dongle or Bluetooth). A _____ keyboard has a physical USB dongle that plugs into the host computer and communicates over a proprietary 2.4 GHz signal, while a _____ keyboard pairs directly with the Bluetooth radio in the host device.

Answer: Wired; wireless; wireless (RF); Bluetooth.

Question 4

A _____ is an input device that translates hand/stylus movement directly on a flat surface into cursor movement on screen, used by artists and designers. A _____ captures live video and audio and is used for video calls. A _____ is a special projector-style input surface that detects touch.

Answer: Graphics tablet; webcam; interactive whiteboard (smartboard).

Question 5

Speakers and headphones are _____ devices that convert digital audio signals (passed through a DAC) into _____ sound waves. Headsets combine headphones with a _____ for two-way audio. USB audio devices include their own _____ and do not rely on the motherboard sound chip.

Answer: Output; analog; microphone; DAC (digital-to-analog converter).

Question 6

KVM (Keyboard Video Mouse) switch allows _____ computers to share a single set of peripherals. The user presses a _____ to toggle control between machines. KVM switches are useful in data centers where many servers must be managed from _____ keyboard and monitor.

Answer: Multiple; button (hotkey); one.

Question 7

A _____ converts digital files to 3D physical objects by depositing material layer by layer. The most common consumer type uses _____ filament (plastic) melted through a heated nozzle. A _____ scanner captures the shape of a physical object as a 3D digital model. Together these tools form part of a digital _____ workflow.

Answer: 3D printer; FDM (fused deposition modeling); 3D; fabrication (manufacturing).

Question 8 -- Real World Application

REAL WORLD: A small law office is replacing their aging all-in-one inkjet printer. They print about 500 pages per day in black and white, with occasional color printing for client cover sheets. They also frequently need to scan multi-page contracts. What type of printer/scanner setup would you recommend and why? Consider cost per page, speed, and document handling.

Answer: Recommendation: A business-class laser multifunction printer with an automatic document feeder (ADF). Reasons: (1) Cost per page -- laser toner is far cheaper per page than inkjet ink at 500 pages/day; ink costs would be excessive. (2) Speed -- laser printers print at 30-60+ ppm; inkjets are much slower for volume. (3) ADF -- automatically feeds multi-page documents through the scanner without manual page-by-page placement, essential for scanning contracts. (4) Reliability -- laser printers are designed for high-volume use; inkjets will fail far sooner at this volume. A color laser MFP gives them occasional color at reasonable cost while keeping daily black-and-white costs low.
