

# Software Installation and Configuration -- Guided Notes

## ANSWER KEY

Unit tp-3.4 | CompTIA Network+ N10-009 Obj. FC0-U71 3.4 | N10-008 FC0-U71 3.4

For instructor use / distribute after students complete the notes.

---

### Question 1

Software installation copies program files to the \_\_\_\_\_ drive and registers the application with the \_\_\_\_\_ (on Windows). Common installer formats on Windows include \_\_\_\_\_ (installer executables) and \_\_\_\_\_ (Microsoft Installer packages). On macOS, applications are often packaged as \_\_\_\_\_ files.

*Answer: Hard/SSD; Registry; .exe; .msi; .dmg (disk image).*

### Question 2

A package manager automates \_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_ of software. Linux distros use package managers like \_\_\_\_\_ (Debian/Ubuntu) and \_\_\_\_\_ (Red Hat/Fedora). macOS uses \_\_\_\_\_ (third-party). Windows 11 introduced the \_\_\_\_\_ package manager.

*Answer: Installation, updating, removal; apt; dnf/yum; Homebrew; winget.*

### Question 3

A \_\_\_\_\_ installation stores all program files within the application bundle, avoiding conflicts with other software. A \_\_\_\_\_ installation installs shared components into system directories and registers them with the OS, which may cause \_\_\_\_\_ conflicts when multiple apps share the same library versions.

*Answer: Portable (self-contained); standard (traditional); dependency (DLL).*

### Question 4

Software \_\_\_\_\_ are released to fix security vulnerabilities or bugs. \_\_\_\_\_ are larger releases that add major features or overhaul components. \_\_\_\_\_ updates are small, frequent patches between versions. Keeping software updated reduces the \_\_\_\_\_ of exploitation from known vulnerabilities.

*Answer: Patches; major (version) updates; minor (point); risk.*

### Question 5

Driver software allows the OS to \_\_\_\_\_ with hardware devices. Without the correct driver, the OS cannot use the device. Drivers are often installed automatically via \_\_\_\_\_ or downloaded from the \_\_\_\_\_ website. An incorrect or corrupted driver can cause \_\_\_\_\_ (Blue Screen of Death) on Windows.

*Answer: Communicate; Windows Update; manufacturer's; BSOD.*

### Question 6

Before installing software on a corporate device, an IT department should: verify the software is \_\_\_\_\_ through legal channels, check \_\_\_\_\_ minimum requirements, test on a \_\_\_\_\_ machine

first, and ensure the software does not violate \_\_\_\_\_ security policies.

*Answer: Licensed; hardware/system; non-production (test); company.*

### Question 7

Silently installing software means installing with \_\_\_\_\_ user interaction, which is useful for deploying to many machines via \_\_\_\_\_ remote management tools. Windows Group Policy and tools like \_\_\_\_\_ or Microsoft Endpoint Manager (Intune) enable \_\_\_\_\_ deployment of software across an organization.

*Answer: No; MDM/RMM; SCCM (System Center Configuration Manager); automated (bulk).*

### Question 8 -- Real World Application

REAL WORLD: A user downloads and installs a free video converter they found through a search engine. After installation their browser homepage changes, pop-up ads appear, and scans detect potentially unwanted programs (PUPs). Explain what likely happened and what steps the technician should take to clean and prevent this in the future.

*Answer: What happened: The installer used a bundled installation -- in addition to the video converter, additional software (a browser hijacker, adware, or PUPs) was secretly included in the installer package. The user likely clicked through the installer without reading each screen, accepting all optional bundles by default. Remediation steps: (1) Uninstall the video converter and all unknown programs installed around the same date via Programs and Features. (2) Run a PUP scan with Malwarebytes or a similar tool. (3) Reset the browser homepage, search engine, and extensions. (4) Check startup programs (Task Manager > Startup) and disable unknown entries. Prevention: only download software from official vendor websites or verified app stores; read every page of installers and choose custom install to deselect bundled extras; use a browser extension or DNS filter to block known malware domains.*
