

Connector Types — Guided Notes

Unit 1.3.3 | CompTIA Network+ N10-009 Obj. 1.3 | N10-008 1.3

Name: _____ Date: _____ Period: _____

Complete each question using the lesson reading. Write in the blank or answer in the space provided.

Question 1

RJ-45 has _____ pins and is used for _____. RJ-11 has _____ positions and is used for _____. The key physical difference is _____.

Question 2

BNC connectors use a _____ locking mechanism and were used for _____ Ethernet. F-type connectors use _____ and are found on _____.

Question 3

Match each fiber connector to its physical description and status:

LC → _____

SC → _____

ST → _____

Question 4

An MPO/MTP connector carries _____, _____, or _____ fibers in a single housing. It is used in _____ environments where running individual fiber patch cables for every connection is impractical.

Question 5

DB-9 is a _____ pin serial connector used for _____ access to network devices. It works even when the network is completely down because it is _____ access. Modern laptops require a _____ adapter to use it.

Question 6

SFP supports up to _____ Gbps. SFP+ supports up to _____ Gbps. QSFP+ supports up to _____ Gbps. The advantage of SFP-style ports over fixed ports is _____.

Question 7

PoE (Power over Ethernet) uses _____ connectors to deliver both _____ and _____ over the same cable to devices like _____, _____, and _____.

Question 8 — Real World Application

REAL WORLD: You're setting up a new switch with SFP+ ports. You need to connect it to two devices: one 60 meters away over existing multimode fiber, and one directly adjacent in the same rack. What transceiver type do you order for each connection and why?

Download the answer key from the class server:

```
